

I am writing to comment about the proposed addition of fees/taxes regarding broadband and wireless broadband. The reason for these fees was and is to help the rural public, but due to the fact that funds are misappropriated, I ask that the commission would please just keep thier hands off, and let the market decide! Broadband is making its way to market, but the main reason against its use is cost. As companies start to bring it to market, the last thing they need are more fees from beauracracies such as yours.
